

Cómo Encontrar Repuestos de Cartuchos Filtrantes Usando la Guía de Repuestos UNICEL 2006

1. Medir el Diámetro Exterior del Cartucho (en Pulgadas, con un error de $\pm 1/32''$) ($1''=2,56$ cm).

2. Medir la Longitud del cartucho (en Pulgadas, $\pm 1/16''$) incluyendo la capa de goma.

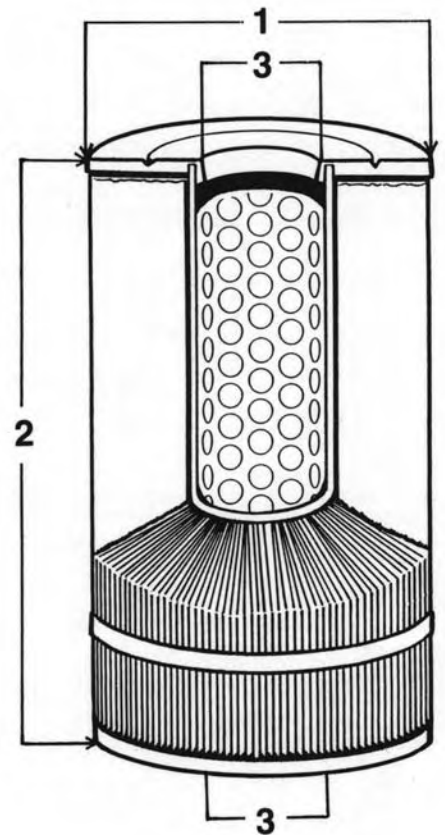

GEDAR recomienda medir por el agujero central, si es posible.

3. Identificar la parte superior e inferior del Cartucho

Si la parte superior y/o inferior son abiertas medir el diámetro interior (en pulgadas, $\pm 1/32''$)

4. Anotar el OEM nombre y modelo del cartucho para buscar el equivalente.

5. Contar el número de pliegues (± 2)

La información obtenida se usará para identificar el repuesto apropiado. En las páginas 1 a 17 de la presente Guía, están los Cartuchos filtrantes Unicel agrupados en "series" según el diámetro Exterior (D.E.) del cartucho. Por ejemplo, la Serie 2000 comprende los cartuchos cuyo D.E. está entre 2 y 2.99 pulgadas; la serie 9000 comprende los cartuchos cuyo D.E. es igual a 9 pulgadas o mayor. *Notar que si el D.E. es otro, por ejemplo 4-15/16" o 6-15/16" quizás sea necesario consultar la siguiente serie, i.e., la serie 5000 y la serie 7000, respectivamente.*

Dentro de cada serie, los cartuchos se ordenan por D.E. y la longitud del Cartucho y se identifican la parte superior e inferior, la configuración, número de pliegues, y su respectivo OEM.

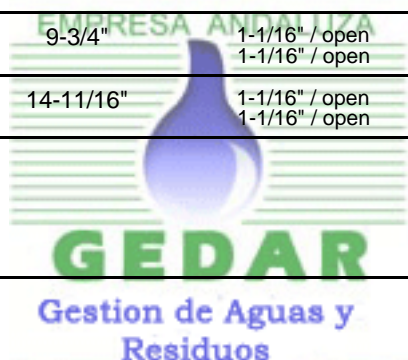

Los cartuchos listados entre líneas horizontales son intercambiables.
